esigned by Ben van Berkel and developed with UNSx (the Dutch firm's team of researchers inside UNStudio) for LaCividina, the Node+ sofa, dormeuse, systems is a well-structured and complex range of padded pieces, backrests, dividers, and accessories.

Node+ is an ambitious system that is designed to cater to people's needs and adapt to suit the countless activities that they carry out every day.

The system completes the concept of aesthetic and functional versatility by enriching it with technological details: from voice control to adaptive sensors.

With the Node+ design, office spaces can become a compendium of aesthetics, functionality, comfort, and versatility, and tailor-made for the future.

The new, adaptable furniture system was specifically created by van Berkel to respond to changing requirements over the course of the day.

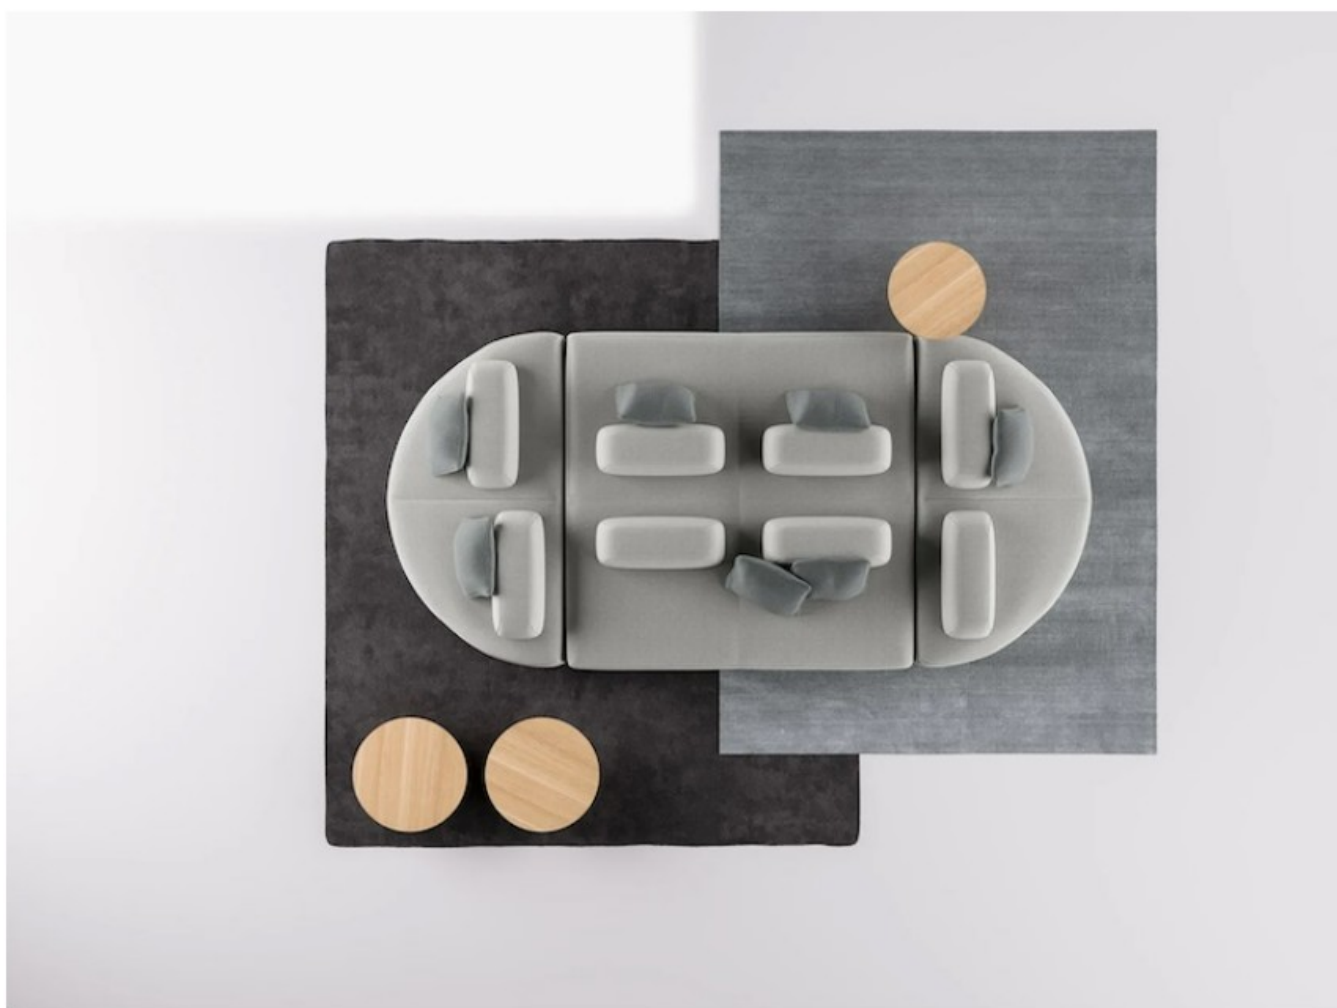

Node+ can be used to design and configure micro-architectural systems that provide the scope for relaxation, work, privacy, and socializing, sometimes all at the same time, for both homes and public spaces.

Padded pieces form the cornerstone for the creation of complex arrangements that satisfy all of the needs of living rooms and public spaces.

Seclusion and protection are provided by the divider panels.

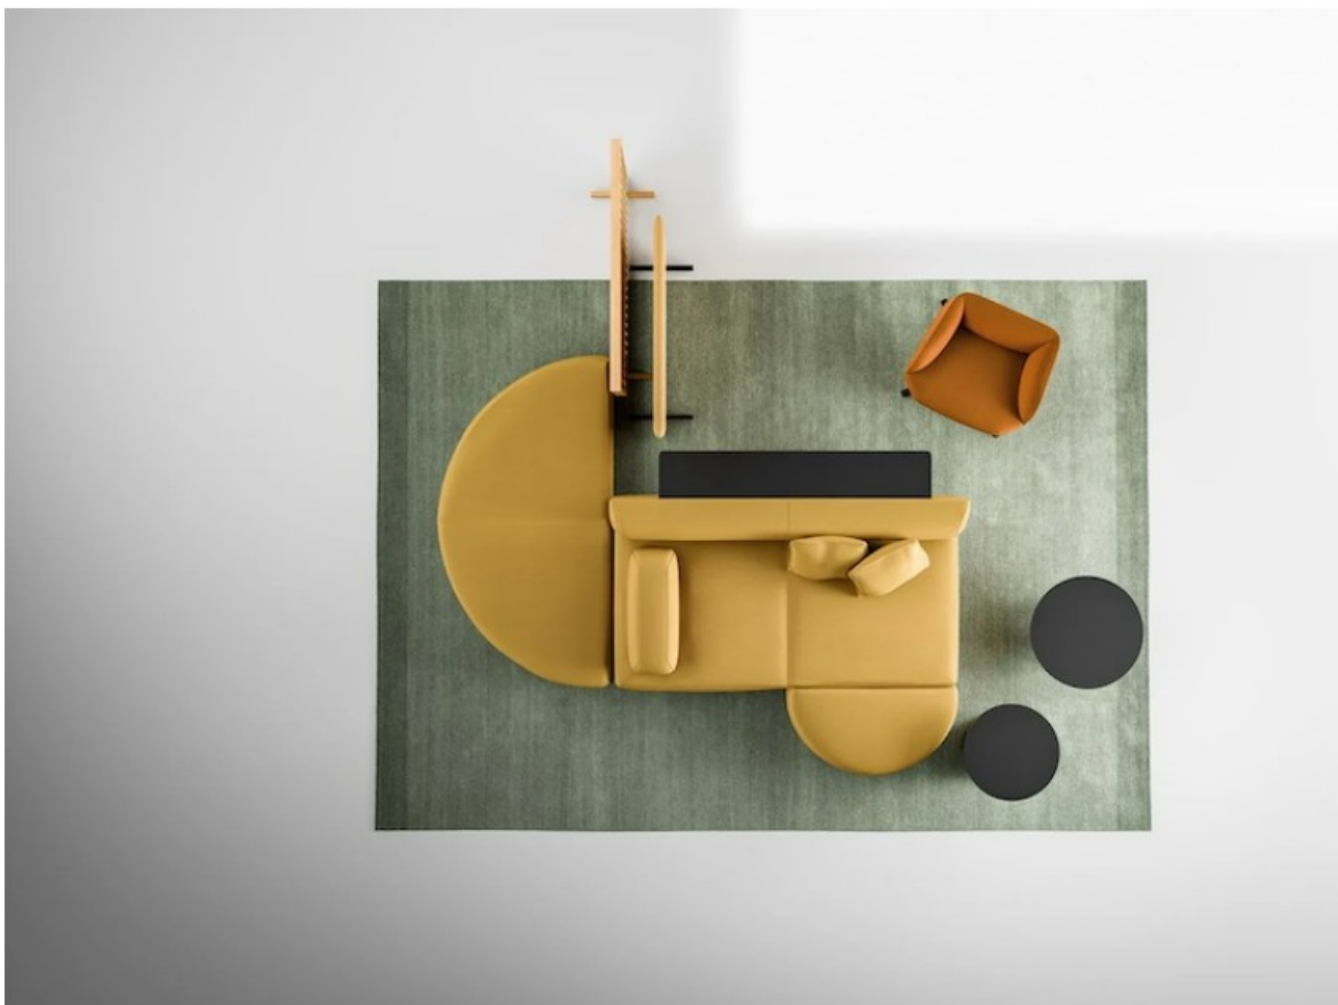

Relaxed postures are encouraged by armrests, backrests, and cushions that can be positioned freely to suit individual seating needs; the desk can be used for working

The tables provide additional support for all kinds of items, including laptops.

the padded pieces are supported by a wooden base with an understated design and have full, smooth outlines.

The selection of rectangular, square, and semicircle shapes means that they can be arranged in all sorts of ways, from simple linear sofas to more complex compositions, including two-sided ones.

Two different types of dividers are available: wooden slats with an Oriental flavor to offer a little privacy; and padded partitions for acoustic insulation.

Fusing comfort and practicality, the development process for Node+ revolved around people and their needs.

As well as being ideal for all activities that take place in the home – from relaxing to working—it is also perfect for public spaces, where lots of different people all come together, each with their own specific requirements.

The design encapsulates the spirit of our time, fluidly and flexibly reflecting our lifestyles.
